

FEB. 01 2002

JAN 29 2002

Introduction to Digital Image Processing

CT 3060

Prerequisite : CS2010

Instructor : David Gregg Libero Ficocelli
Office : C421 C424
Phone : 539 -2976 539 - 2825

Course Content:

To introduce students to the fundamentals of image processing and to give them an opportunity to utilize these techniques on real images. The core topics will include image fundamentals, image transforms, image enhancement and restoration, segmentation and encoding. We will also venture to cover advanced topics in applied image processing such as: pattern recognition, scene analysis and morphing. Course topics **may** include (but not limited to) all or some the following:

Image Fundamentals:
visual perception, sampling and quantization
pixel relations and imaging geometry

Image Transforms:
Fourier transforms, Hough Transforms

Image Enhancement:
histogram-modification techniques, smoothing and sharpening, pseudo-color

Image Restoration:
algebraic approach, inverse filtering
geometric transformations

Image Compression:
encoding process and criteria
lossless compression and lossy compression;

Image Segmentation:
thresholding, edge detection, boundary following,
region growing, motion detection;

Image Description:
chain codes, shape descriptors, morphology

Pattern recognition:
decision rules,

Lab : The scheduled lab for this course is in J101

Text: Digital Image Processing: Principles and Applications
Gregory A. Baxes
John Wiley and Sons

Marking:

Lab Assignments/		33%
Projects/Presentation		7%
Exam I	15%	
Exam II		15%
Exam III		15%
Exam IV		15%

Special Notes :
The Student will be eligible for a passing grade for the term, only if they obtain 30 out of a possible 60 marks (on exams).
